2.7 Afghanistan Milling Assessment

Main mills in the country have recently restarted the activity after the acute years of the conflict.

Recently, the current milling capacity increased significantly reaching 1 MMT per year. Currently the imported flour concorrential price does not allow the mills to reach its full capacity.

Additional information can be located from sources which are regularly maintained and reflect current facts and figures. For more specific and detailed overviews of food availability and market conditions, consult the following source:
