

2.5 Cameroon Waterways Assessment

With the exception of the Benué River, waterways navigation is not developed in Cameroon.

In 2017, a study was done on eight waterways and infrastructure investment should occur soon, though at the time of assessment major progress on this matter was not apparent:

- River Wouri, between Yabassi and Douala for a length of 67 km
- River Nyong, between Abong-Mbang and Mbalmayo, for 215 km
- River Sanaga, from Edéa to Atlantic Ocean, for 60 km
- River Benoué, starting from Lagdo Dam up to Nigeria border, representing 140 km
- River Dja, section Ndongo - Moloundou, 116 km
- River Ngoko, starting from Ndongo up to DRC border
- River Sangha, from Libongo to Congo border
- Finally River Benoué, section between Garoua port to the Nigeria border for 80 km.
