

3.4 Azerbaijan Telecommunications

Azerbaijan Telecommunications

The Azerbaijan economy has been markedly stronger in recent years and, not surprisingly, the country has been making progress in developing ICT sector. Nonetheless, it still faces problems. These include poor infrastructure and an immature telecom regulatory regime. The Ministry of Communications & Information Technologies (MCIT), as well as being an operator through its role in Aztelekom, is both a policy-maker and regulator. A boom in oil and gas exports has boosted the economy, reducing the country's dependence on international aid.
