

## 2.7 Azerbaijan Milling Assessment

### Azerbaijan Milling Assessment

Food prices on some food products increased on a yearly basis

In Azerbaijan, a decline in wheat flour and bread prices was observed in August, which reflects the good 2012 harvest. However, wheat flour prices strengthened in October, although they remained at about the same level till the end of 2012 due to improved domestic supplies from the bumper harvest. However, mutton and beef prices increased by 12 and 6 percent respectively compared to the same period of last year. Since the share of household expenditure on food is significant, any increase in food prices puts vulnerable population groups at risk of food insecurity
